State policies that promote the economic security of our nation’s families can help offset larger economic and social conditions that make it difficult for families to get by and get ahead. This four-part profile provides data on New Hampshire’s low-income children and families and highlights state policy choices regarding families’ work attachment and advancement, income adequacy, and asset development.

In New Hampshire, there are 157,900 families, with 281,329 children. Among these children, 26 percent live in families that are low-income, defined as income below twice the federal poverty level (nationally, 45 percent of children live in low-income families). Young children are particularly likely to live in low-income families.

Low wages and a lack of higher education contribute to families having insufficient incomes. Nationally, 48 percent of low-income children have at least one parent who works full-time, year-round; in New Hampshire, the figure is 44 percent.

Parents without a college education often struggle to earn enough to support a family, but only 32 percent of adults in New Hampshire have a bachelor’s degree. A substantial portion of children in New Hampshire whose parents only have a high school diploma—49 percent—are low income.

Children of foreign-born parents are also more likely to be low income than children of native-born parents.

DATA NOTES AND SOURCES

Data were compiled from 50-state sources. Some state policy decisions may have changed since these data were collected.

1. National data were calculated from the 2011 American Community Survey, representing information from 2011. State data were calculated from the 2009-2011 American Community Survey, representing information from the years 2009 to 2011.

3. If the state calculates co-payments based on the cost of care, figure reflects the co-payment for a 4-year-old in licensed, nonaccredited center care at the maximum state payment rate.

5. States were asked to report state reimbursement rates and the 75th percentile of market rates for their state's most populous city, country, or region. Data reflect basic provider payment rates (higher rates may be available for particular types of care). Rates are considered below the 75th percentile if they are based on an out-dated market rate survey (more than 2 years old).

9. Lawful permanent residents (LPRs) are generally barred from federal benefits during their first 5 years as LPRs, unless they entered the U.S. before 8/22/96. Exceptions include refugees and U.S. veterans (and their families). See data source for more details.

11. Figures reflect the percent of children (under age 18) and adults (ages 18-64) who did not have health insurance coverage at any point during the year.

12. Figures reflect the percent of children under age 18 and the percent of adults under 65 who were covered by employer-based health insurance during at least part of the year.

13. Figures reflect the percent of children under age 18 and the percent of adults under 65 who were covered by employer-based health insurance during at least part of the year.

14. Figures reflect the percent of children under age 18 and the percent of adults under 65 who were covered by employer-based health insurance during at least part of the year.

15. Figures reflect the percent of children under age 18 and the percent of adults under 65 who were covered by employer-based health insurance during at least part of the year.

16. Figures reflect the percent of children under age 18 and the percent of adults under 65 who were covered by employer-based health insurance during at least part of the year.

18. A general “good cause” provision extends eligibility to persons who leave their jobs for “personal emergencies” or “compelling circumstances”, which should include—among others—child care conflicts, illness, domestic violence, and spousal relocation. Eligibility determinations, however, may vary in practice. States may also specifically recognize certain reasons as “good cause”; for more information see Appendix B in Rebecca Smith, Rick McHugh, Andrew Stettner, and Nancy Segal, *Between a Rock and a Hard Place: Confronting the Failure of State Unemployment Insurance Systems to Serve Women and Working Families*, National...

21. This figure reflects the percent of part-time workers who are available to work full-time, but usually work less than 35 hours per week due to slack work or unfavorable business conditions, inability to find full-time work, or seasonal declines in demand. U.S. Department of Labor, Bureau of Labor Statistics, Geographic Profile of Employment and Unemployment, 2003, "Estimates for States, Table 16: Employed and Unemployed Persons by Full- and Part-Time Status, Sex, Age, Race, and Hispanic or Latino Ethnicity," http://www.bls.gov (accessed March 14, 2008).

24. Calculations include income tax credits that are available to all low-income families in the state, such as state earned income tax credits.

30. Potential duration is the maximum number of weeks of benefits that a claimant is eligible for under the regular state program. In most states, it is determined based on the amount and distribution of the recipient's earnings in the base period; eight states have a uniform potential duration for all claimants.

31. Food Insecurity: Figure reflects the percent of households forced to reduce food intake, disrupt normal eating patterns, or go hungry because they lack the money or resources to obtain adequate food.

32. Adult lawful permanent residents (LPRs) are generally barred from federal benefits during their first 5 years as LPRs. Exceptions include refugees and U.S. veterans (and their families). See data source for more details.

34. A child support pass-through is the amount of collected child support that the state gives to families on whose behalf the child support was collected. A child support disregard is the amount of child support that the family can keep without lowering their TANF benefits.

35. Rule applies to SCHIP-funded Medicaid expansions, where applicable.

37. Figure reflects the percent of children in households that have insufficient net worth to subsist at the federal poverty level for three months in the absence of income.

38. Figure reflects the percent of households who are homeowners.
